

Software Creation Outpaces Software Operations

The velocity of software production is higher than ever, creating a paradox where code is written faster than it can be reliably and safely shipped.

Software Creation (Dev) AI-Accelerated Speed

2X

PR Volume

AI Coding Assistants:
have drastically accelerated the core software creation process.

PR Acceleration:
Coding aids have effectively doubled pull request volumes globally.

Software Operations AI-Accelerated Speed

1x

No Boost

Operations Stagnation:
The ops later has failed to scale or match development velocity spikes

Reliability Gap:
Creates a hazardous bottleneck where code is written faster than it can safely ship
