

Aiden OS

The Production-Grade Agentic
Infrastructure Runtime Layer

Aiden OS ensures the factory is
reliable for production environments.

TEMPORAL CORE

Workflow Orchestration

Orchestrates workflows with durability, retries, and state tracking.

FINANCIAL GOVERNANCE

Cost Governance

Tracks inference token spend and automatically shifts familiar workloads to cheaper, optimized models.

INTELLIGENT ROUTING

Model Routing

Selects the appropriate LLM based on task type and OCG confidence dynamically.

NATS MESSAGING

Event Messaging

Individual agents accelerate specific tasks but fail because they do not share operational history.

OPEN POLICY AGENT

Policy Enforcement

Enforces policy at every action boundary before execution.
